APL Shared libraries

APL Pdf

Summary

The **local_aplpdf** plugin is a shared dependency of many APL plugins that provide PDF generation. Moodle core pdf implementation has several limitations that make difficult some operations such as generating multiple page documents.

This library provides an alternative version of TCPDF, encapsulated with a technical helper to pilot PDF generation in a more simple way.

Additionnaly, we assemble other libraries that have PDF concerns, and may be usefull in the future, such as mergePDF, pdf2svg, xpdf, etc.

Guides

- Installation guide
- User guide

Featuring

- **tcpdf:** Fixed version of TCPDF
- **vftcpdf:** An over layer of PDF objects management
- **pdf2svg:** Pdf to SVG converter
- **mergePDF:** Allowing merging several documents.
- **xpdf:** Allowing extracting text from PDF documents.

Technical sheet

- **Component type:** Local
- **Plugin name:** aplpdf
- **Supported versions:** m41 to m53
- **Distribution:** Public
- **Availability:** RC

Builds

Note: a “Failing” status does not necessarily mean that the plugin does not work. This status reflects the result of automated tests checking the code against Moodle's strict standards. We are continuously working on bringing all supported plugins progressively into compliance with these development rules.

Branch	Continuous integration tests
405	MOODLE_405_STABLE passing
501	MOODLE_501_STABLE passing
