Auth MultiMnet (Mnet network authentication)

Presentation of MultiMnet authentication

MultiMnet authentication is an authentication method that lets users log in to a network of Moodles: virtualised multi-instance Moodles or physical installations.

Features

- Free circulation of a user across a Moodle network, through any Moodle instance (which the Moodle core Mnet layer does not allow).
- Possible arrival through any Moodle of the network (even though the user was registered on another original instance: their home Moodle).

Guides

- Installation guide
- User guide
- Integrator guide

Technical sheet

- **Component type:** Authentication method
- **Name:** Multi-Mnet authentication
- **Technical name:** auth_multimnet
- **Supported versions:** m41 to m53
- **Distribution:** Integration and APL resellers
- **Availability:** Stable

Builds

Note: a “Failing” status does not necessarily mean that the plugin does not work. This status reflects the result of automated tests checking the code against Moodle's strict standards. We are

continuously working on bringing all supported plugins progressively into compliance with these development rules.
