NetYpareo authentication: Installation guide

Installation

* Unzip the archive into the “auth” directory of your Moodle installation.

* Go through the administration notifications to finalise the installation of this component

Setting up the Moodle access link in NetYpareo(tm)

You must log in as an administrator to the NetYpareo™ portal.

- Add an application in the NetYpareo™ applications - Enter the URL of the Moodle login page:

```
https://<your moodle>/login/index.php
```

The Moodle link must appear in the “Applications” section

Solving open file limit problems

On some distributions, SOAP synchronisation may require a large number of file streams. It may be necessary to raise the permanent ulimit of the nginx and php-fpm daemons.

Debian and Ubuntu:

```
mkdir /etc/systemd/system/nginx.service.d
echo "[Service]
LimitNOFILE=10000" > /etc/systemd/system/nginx.service.d/local.conf
systemctl daemon-reload
systemctl restart nginx
```

Do the same for the php<v.w>-fpm daemons.
