User Guide

Availability condition: Time spent in the course (CourseTime)

This plugin makes it possible to make activities accessible only after a certain working time has been measured in the course. The measurement of this working time is obtained from the block Use Stats which must be installed beforehand in Moodle.

The usual process for using this plugin is :

1. Open the course and set it into editing mode
2. On an activity, or a section, go to the local settings and open the availability section.
3. Choose a “Course Time” availability item
4. Adjust the threshold time (given in minutes)
5. Save back the activity or section settings

As a result any student having NOT passed enough time in the course WILL NOT access to that activity or page.

Functional restrictions

- This plugin cannot evaluate the time passed in **another course** to trigger the availability condition.
