Bloc de Prépositionnement (AuditQuiz Results)

- **Type de composant :** Block
- **Nom :** Auditquiz Results
- **Versions :**  to :M3.1:
- **Distribution :** Public and PRO
- **Disponibilité :** RC
- **Dépôt :** https://github.com/vfremaux/moodle-block_auditquiz_results

Presentation

This solution makes it possible to build a system of prepositioning on knowledge or skills (depending on the meaning of the questions), from a battery of tests (one or more) drawing questions from a part of the question bank.

The results are separated and scored by category and aggregated to the next category. The question bank should plan to position all the questions used in the second level of a question tree.

The solution also makes it possible to establish a correspondence of recommendations between the categories of questions used and courses that should be recommended to remedy a bad result on the category concerned. These correspondences and remediation proposals are triggered by one or two adjustable thresholds.

guide d'utilisation

- Guide d'installation
- Guide d'utilisation
- Guide technique

Sommaire des fonctionnalités

- Sélection des tests à intégrer aux résultats
- Edition des corrrespondance de recommandation
- Edition des seuils de déclenchement des recommandations
