AuditQuiz Results

Presentation

This plugin provides a system for monitoring prerequisite knowledge or skills (depending on the question), from a set of quizzes (one or more) using the moodle question bank.

the auditquiz results plugin will graph student's result per question category, calculating the category score.

The questions will have to reflect the knowledge tree organisation. Questions can be organized in 2 levels. See the User Guide for details about question setup.

Several quizzes can participate to the result, all question sets being merged for result.

You will have to ensure that each result category have **enough questions inside** for the testing evaluation be significant (Evaluating a topic with only one question would be a simple 0/100% switch, not leading to significant evaluation).

Results are displayed as a bargraph, showing relative accomplishment of the student in each category.

Teacher can examine results for single student or groups.

Pro extension

Being used with an **active LicenseKey**, more sophisticated features are available (see the list). Major of those will be the course recomendation system using results to promote knowledge rehab courses, when students fall below a targetted score in some categories.

Features

- Scoring answers by question category (Multiple scoring)
- Graphical visualization of ranking by question category or knowledge category(Based on standard Moodle tests)
- Selection of tests to include in results
- Group report by user (pro version)
- Group report by knowledge category (pro version)

Pro Features

- Editing recommendation correspondences
- Editing recommendation trigger thresholds
- Knowledge rehab course recommendations
- Proposed courses, or imposed courses
- Capture of a results image to export in any document

Dependancies

Additionnal library provided for graphical presentation.additionnals librairies APLPlot .

Builds

Note: a “Failing” status does not necessarily mean that the plugin does not work. This status reflects the result of automated tests checking the code against Moodle's strict standards. We are continuously working on bringing all supported plugins progressively into compliance with these development rules.
