Database Activity Behaviour Block: Installation Guide

Installation

This block requires, in addition to the standard installation, the setting up of:

- customscripts to divert the main entry points of the database module.
- a renderer override in the theme(s) used on the platform.

Standard installation

- Unzip the archive into the `/blocks` directory of your Moodle installation.
- Browse the administration notifications to complete the installation

Setting up the customscripts

You must have previously enabled customscripts by defining a repository directory for your customscripts in your installation, in Moodle's central `config.php` file:

```
$CFG->customscripts = '<chemindescustomscripts>';
```

Then copy the content of the `__customscripts` folder of the distribution to that location, respecting the inner directory structure.

Setting up the theme override

In recent versions of Moodle (> 3.1), most themes contain a `classes` directory where renderer overrides are stored. If it does not exist, you will have to locate where the theme designer planned to store these classes.

Copy the renderer `mod_data_renderer.php` located in the `__theme/classes` directory of the distribution to that location.

Warning, if you already have a quiz renderer override from earlier integrations, then you will have to merge the renderers to provide all the functional overrides.

Settings

There is no central setting for this block
