Course Import block

Presentation

An administrator can trigger the import of a course located on another Moodle through this block. In its current version, this block is designed to offer a simple course transport function between platforms playing the following roles respectively:

1. main operating platform
2. archive platform
3. template platform (catalogue function)

The block examines the list of remote courses provided by a target platform (through web services) and lets you choose a course to import. In phase 1, the course is deployed locally from a remote archive into a single category (called the arrival category) designated in the block's central configuration.

Technical sheet

- **Component type:** Block
- **Name:** Course import

- **Technical name:** block_import_course
- **Functional family:** Administration
- **Supported versions:**  to 
- **Distribution:** on specific integrations
- **Availability:** Beta (Phase 1)
- **GDPR compliance:** Yes

Builds

Note: a “Failing” status does not necessarily mean that the plugin does not work. This status reflects the result of automated tests checking the code against Moodle's strict standards. We are continuously working on bringing all supported plugins progressively into compliance with these development rules.
