Overriding the Page with an Activity: User Guide

Purpose

This is a behaviour we implemented to create “fluid” page-format courses in which a quiz directly follows a “resources” type course page, without going through an intermediate page that would carry only a single activity link.

The aim is to remove “intermediate” screens as much as possible. This corresponds to a specific use case: making the page format behave as close as possible to a “scorm” module

How to

1. Switch to Edit mode
2. In the Add a page area, under the “Override the page with an activity” menu
3. Choose the activity
4. Save
