APLCore: Configuring the additional documentation

A number of ActiveProLearn plugins give access to enriched documentation provided as a complement to TMA support. The following parameters configure access to this documentation.

Access to the extended documentation requires:

- A subscriber identifier provided by APL in addition to your products
- A public key provided by APL and matching your subscriber identifier

The documentation rerouting mechanism for APL plugins assumes an addition of code (patch) in the standard Moodle code. Without this patch, there will simply be no rerouting and Moodle's "standard" documentation will always be accessible behind the contextual documentation link.

Documentation base URL

The URL of the vendor's (APL) additional documentation service. This URL can include a `{lang}` parameter to adapt the routing to a supported documentation language (currently only fr or en)

Documentation subscriber id

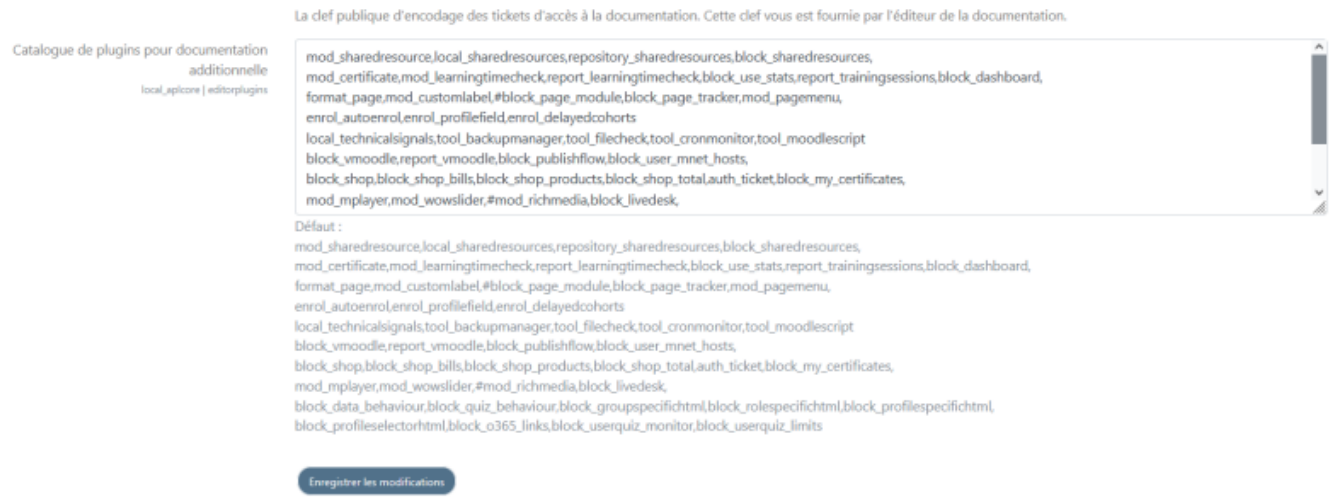

Access to the extended documentation requires having obtained a documentation subscriber identifier. This identifier is provided to you by ActiveProLearn, in addition to your Third-Party Application Maintenance licences.

Documentation public key

The public key is provided by ActiveProLearn and is used to authenticate access to the documentation.

Plugin catalogue for the documentation

The list of plugins benefiting from extended documentation can be extended as new publications appear. This setting lets you add new plugins supported by the extended documentation, even after the first installation of the APLCore libraries.
