

APL Shared libraries

APL Core

- **Component type:** Local
- **Plugin name:** apcore (Core APL Features)
- **Versions:** > 
- **Distribution:** Publique
- **Availability:** RC

The APLCore library is a library that brings together essential additions and shared by many APL plugins. It avoids the multiplication of copies of code in all plugins using these central features, and facilitates the management of library conflicts.

The APLCore library is also at the heart of ActiveProLearn's Application Tierce Maintenance (TMA) licensing system, providing the additional feature unlock mechanism (Pro Zone) in all value-added plugins.

It also includes a number of complements to Moodle's "core" libraries, or to some embedded open-source libraries, when the latter admit extensions.

It also incorporates some third-party libraries of very general use or crossports from other projects.

In summary, this plugin provides common services to many plugins in the ActiveProLearn range.

Guides

- [Installation guide](#)
- UserGuide : There is no User Guide as no directly usable features by end users.
- [Configuring APL Additional Documentation](#)

Featuring

- **The APL Licensing system:** Allows to manage activation keys for opening Pro features.
- **Moodle extrapolations:** These are "moodle core" additions we want to add to support better user experience or provide missing features to Moodle.
