

APL Shared libraries

APLPlot : Technical guide

Preliminary

Local APLPlot library is a “living” library, accumulating our own needs of generic plotting facilities for our projects. Thus it is an active library subject to changes, evolution, specially in adding more configuration wrappers to the underlying library it uses. We will very probably work essentially in additive mode, i.e. mostly adding new configuration entries to improve our flexibility, but with sufficient defaults to preserve previous behaviours.

The below settings are “at the moment” settings and will be subject to change.

global settings

Extra plotting libraries for APL plugins

JQPlot simple donut colors
local_aplplot | donutrenderercolors

Default: #00cc00,#66ff66,#ff6666,#ff0000

Give an HTML color codes list, coma separated.

JQPlot graph shadows
local_aplplot | jqplotshadows

☒ Default: Yes

If set, will put shadows on shapes and plot generators.

Google Maps SKU API Key.
local_aplplot | googlemapsapikey

Default: Empty

Google maps are now only available on pay per use mode. You must subscribe to Google API services to use maps.

Save changes

JQPlot simple donut colors

for those plugins who needs donuts, this setting let tune the default first colors used by donuts data categories. Give a list of colors that will be applied to first data categories in order. Above this color set, arbitrary colors will be generated.

JQPlot graph shadows

Globally enables shadows on grap (JQPlot) objects.

Google Maps SKU API Key

This is your client API key to GoogleMaps for those plugins which use googla API ([Dashboard element block](#) does, at the moment)
