

APL Shared libraries

APL Pdf

Summary

The **local_aplpdf** plugin is a shared dependency of many APL plugins that provide PDF generation. Moodle core pdf implementation has several limitations that make difficult some operations such as generating multiple page documents.

This library provides an alternative version of TCPDF, encapsulated with a technical helper to pilot PDF generation in a more simple way.

Additionally, we assemble other libraries that have PDF concerns, and may be useful in the future, such as mergePDF, pdf2svg, xpdf, etc.

Guides

- [Installation guide](#)
- UserGuide : There is no User Guide as no directly usable features by end users. Most of the PDF features are driven from the calling plugin.
- [Technical guide](#)

Featuring

- **tcpdf**: Fixed version of TCPDF
- **vftcpdf**: An over layer of PDF objects management
- **pdf2svg**: Pdf to SVG converter
- **mergePDF**: Allowing merging several documents.
- **xpdf**: Allowing extracting text from PDF documents.

Technical details

- **Component type**: Local
- **Plugin name**: aplpdf
- **Versions**: > 
- **Distribution**: Public
- **Availability**: RC
