Local Deffinum: Statistics extraction and Deffinum services

Presentation

This plugin is intended for proprietary use in the Deffinum project.

Features

It provides a specific data extraction web service for publication in the learner workspace of the Deffinum portal.

Data is obtained on presentation of a user identity, to be chosen between the Moodle id (id), the user identifier (username), the identification number (idnumber), the email (email), or the openid identifier (oidcuniqid or oidcusername).

Guides

- Installation guide
- User guide (Creating a web service token, standard Moodle)
- Technical guide

Technical sheet

- **Component type:** Local plugin
- **Name:** Deffinum
- **Technical name:** local_definum
- **Supported versions:** m41 to m53

Builds

Note: a “Failing” status does not necessarily mean that the plugin does not work. This status reflects the result of automated tests checking the code against Moodle's strict standards. We are continuously working on bringing all supported plugins progressively into compliance with these development rules.
