User Guide: Moodle Feeding by ENTs: Manual Launch

- **User account:** tick the box then click to synchronise an existing user whose data has changed in the LDAP.
- **Cohorts:** to synchronise a cohort (Requires a discriminator on a user group in an LDAP to know which ones to retrieve on Moodle)
- **Role assignment** Role assignment in the course or on Moodle (in a context) independently of enrolments. The context level must exist in the LDAP.

- **Force update of all entries (including those not modified in the reference period)**: Launch a sync by re-examining all the LDAP data
- **Only refresh existing records. Do not create new ones:** Launch a sync by re-examining only the LDAP data already synchronised on Moodle.
- **Simulation mode:** Simulate the synchronisation.
- **More trace output:** Display more data in the trace window.
- **Disable the automatic cohort lock:** To be handled with care: Removes the prefix if there is

an existing synchronisation prefix via the ent_installer component. In all cases will act as a differential on all cohort definitions.
