MoodleScript: FREEZE CONTEXT

MoodleScript Script Engine

Effect

Locks the execution context of the stack for the following instructions, until the next unlock instruction. Context variables of instructions executed after a lock are no longer written into the current execution context. This makes it possible, for example, to lock the implicit value of identifiers pointed to by the “current” pseudo variable.

Syntax

```
FREEZE CONTEXT
```

Specific attributes

This command has no attributes.

Other defaults

None
