SYSTEM PAY Payment Interface (Société Générale, Banque Populaire, Caisse d'Épargne)

Moodle Shop

Type: Synchronous **Version:** Available in PRO version only, with a configuration support service.

This interface connects to the online payment system of the Nexitis group and of the banks backed by the SYSTEM PAY payment solution.

The merchant must be affiliated with a bank of the group and request the opening of an online commerce service. The bank provides the identification elements to enter in the SystemPay module configurations.

Test configuration

The configuration provides for switching to a test service when the shop is put in test mode in its global configuration. In this case, the identity of the test service is used and the transactions are no longer real.
