

Textes statiques

Capabilities

- local/staticguittest:edit : People having this capability at system level can edit the content.

Inserting a Static GUI Text call into moodle code

Developpers can rely on a simple single function call to insert a gui text into their outputs :

```
require_once($CFG->dirroot.'/local/staticguittests/lib.php');  
$key = '<an unique site wide key>';  
$returnurl = new moodle_url($ME);  
$extracapability = false;  
$textinsert = local_print_static_text($key, $returnurl, $extracapability,  
true);  
echo $textinsert;
```

returnurl should generally call back the same moodle page the text insert is on. As the Static GUI Text is a generic plugin, it may not know itself how to return back to the calling page after content editing.

An extra capability can be given at call time, specifying a particular capability to match at system level to edit this text.
