Tabbed and Filtered QuickForms

This plugin changes radically the way forms are organized by using tabs for accessing to parameter panels. Additionnaly it will allow filtering all QuickForm based forms from unwanted or useless parameters, and select a default value for the hidden elements. Users may choose switching between “Simple” or “Complete” forms (site scope), if they are allowed to, or get the forms version the administrator wants to force the users.

Features

- Display moodle form sections in switchable panels using tabs.
- Allows administrator to tune and filter the form items to hide in all Moodle Quickform based forms, and save the settings. Administrators can also choose a default value to save with the item state.
- Administrator can choose the default form mode.
- Administrator can choose to force the form mode.
- If not forced, users can choose the form mode in their preferences.

Pro/Community versions

Pro version features in addition:

- Import/Export of the masking configuration (between moodle instances)
- Online mask inventory with quick remove capability

Technical sheet

- **Plugin type:** Local
- **Plugin name:** TabbedQuickForm
- **Supported versions:** 

to 

- **Distribution:** Unreleased
- **Disponibilité:** Release Candidate

Builds

Note: a “Failing” status does not necessarily mean that the plugin does not work. This status reflects the result of automated tests checking the code against Moodle's strict standards. We are

continuously working on bringing all supported plugins progressively into compliance with these development rules.
