TabbedQuickForm: Troubleshooting

No form shows the tabs

1. Check that the plugin is enabled in the general settings
2. Check that the patch is in place in the lib/formslib.php file
3. Check that there is no empty line in the page exclusion list.

As an example, here is a list of excluded pages:

- page-mod-tracker-reportissue
- page-mod-quiz-view
- page-admin-tool-mnetusers*
- page-admin-user-user_bulk
- page-mod-data-export
- page-admin-purgecaches
- page-admin-user
- page-admin-tool-usertour
- page-local-userenrols-import
- page-mod-wooclap-mod
- page-mod-zoom-mod
- page-local-vmoodle-view

Some forms are altered (sections not visible, or submit buttons misplaced)

Some QuickForm forms may react badly to tabbing. This is generally the case when the developer has not placed a first form header before the first form entry.
