Catalogue categories class : Concept of categories (Or product lines)

Moodle Integrated Shop : Structural elements

Introduction

Categories make it possible to assemble products in order to present a single product line to the customer on one page. Some back-office management screens will also use categories to split the management scope. You can use categories to group similar products. Category is implemented as a simple concept in the Moodle shop.

Category Properties

- **Catalogue (FKEY) :**The catalogue to which the category belongs.
- **Name:** External Name of the category. Visible in both front office and back office.
- **Description :** This text is diplayed as heading in front office when displaying the category content.
- **Parent ID :** Aloows you to attach a category to another as parent. The front-office can display a hierarchical tab-tree for browsing sub-categories.
- **Order :** Order of category display.
- **Visibility:** A category may be visible or hidden.

Back to the Moodle Shop structure documentation summary - Go to Configuration and implementation of a commercial offer - Back to Local Shop componant - Back to catalogue
