Course Element: Wiki Content

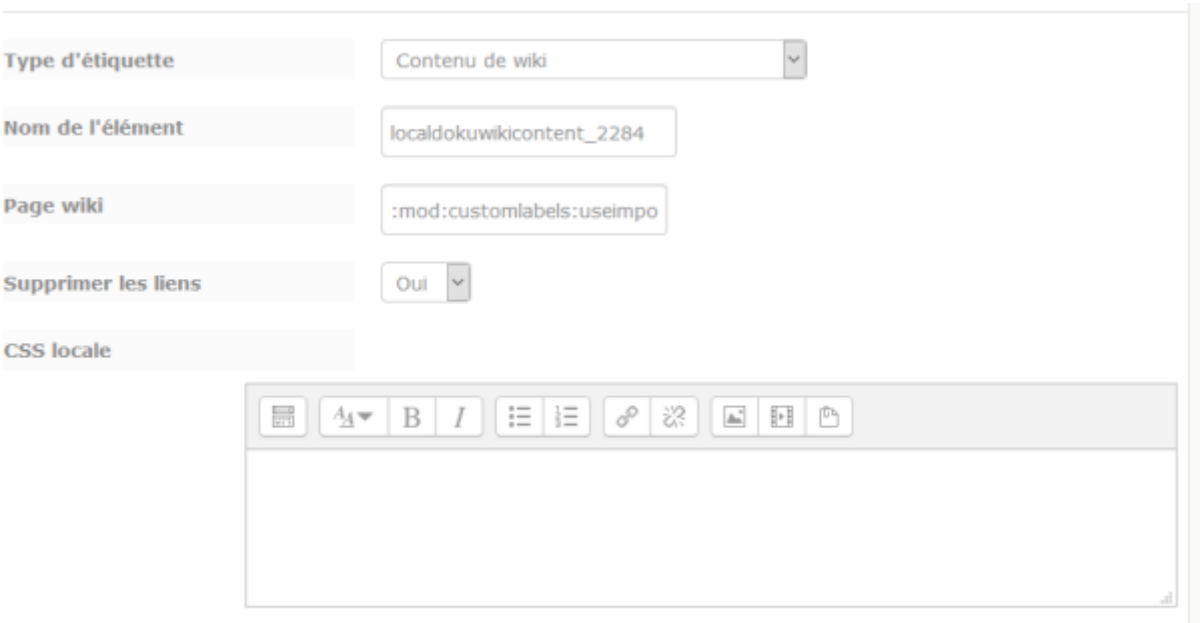

Presentation

The Wiki Content course element makes it possible to display the content of a wiki, optionally freeing it of the links it contains. It can be locally overridden by CSS in order to match your editorial charter.

Added value

Avoid redundancy and the maintenance of multiple contents.

Course element settings

1. Label type: Choose wiki content
2. Element name: docuwiki link only
3. Remove links: yes or no
4. Hide HTML elements: H1, H2 by default - Or enter the html code to exclude from the block

Enter the HTML code, for example h1 and h2 in the settings: html code to hide, to avoid taking over the headings of the wiki pages for example.

These headings will rather be presented in Moodle with the structure elements (headings).

1. Local css: css code for formatting

Excluding wiki content from display in Moodle

Wiki code:

1. At the start of the chapter: **<html><!- nomoodle -></html>**
2. At the end of the chapter: **<html><!- /nomoodle -></html>**

Back to the user guide & pedagogical guide - Back to the Course Elements module index - Back to the plugins index - Back to the catalogue
