Setting Up the Flashcard Activity

Adding a question (on the back of the card) and an answer (on the front of the card)

- “Edit cards” tab and click on “Add a question”
- What you write in the left area will appear on the back of the card. Example: “What is the capital of Norway?”
- What you write in the right area will appear on the front of the card. Example: “Oslo”

Rendering in the interface

- Each question can be modified, or deleted if needed. (Cogwheel and cross icons)

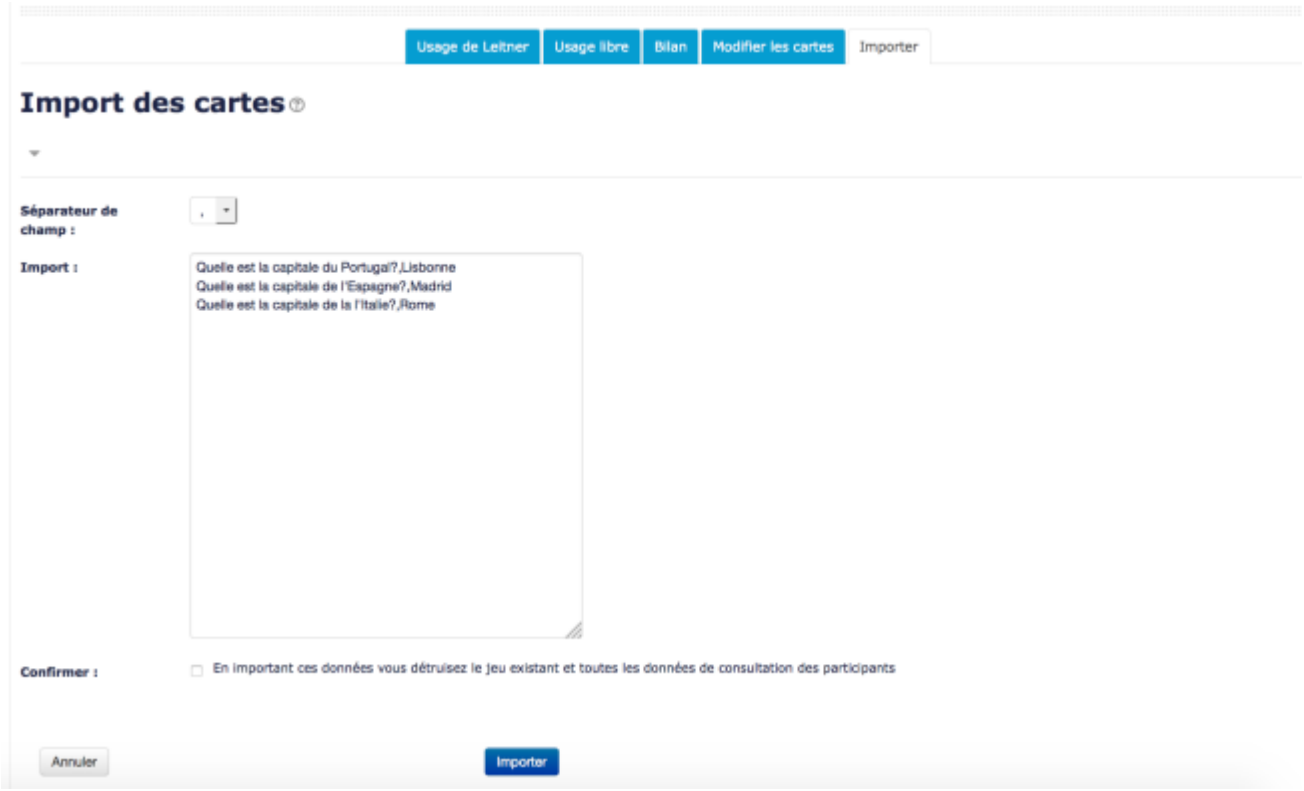

Importing questions

This screen makes it easy to import questions and answers. If you already have a text file containing questions and answers, simply copy/paste the content of the file into the area. You must carefully check which field separator you used.

Note that if you choose import, all the questions entered manually beforehand will be **deleted and replaced by the import you carry out.**

In the example below, the chosen field separator is “,”. Each line corresponds to a card with the question, the field separator “,” and the answer.

Card preview

This screen makes it possible to view the setup of the activity. This exercise is self-assessment, so each learner must find the answer to the question by themselves. Once they think they have found the answer, the learner can click on the card to confirm or not the validity of the answer they found by themselves: If you click on the card, the answer is displayed.
