

# Manage categories

## Magtest multitrack test

Multitrack test is based on output categories. Each output category is a scoring track by itself. When setting up a magest instance you first need to create at least 2 output categories. Categories will also provide some feedback to the user when a dominating score is calculated.

When students choose an answer for each question, the weight of the answer (defaulting to 1) is added to the category score the answer is associated to.

The screenshot shows the 'categories' management interface. At the top, there are tabs: 'Faire le test', 'Prévisualisation', 'Catégories' (selected), 'Questions', 'Importer', 'Résultats', and 'Statistiques'. Below the tabs, the title 'categories' is displayed. A table lists three categories:

Symbole	Nom	Description	Le texte résultat pour cette catégorie	Commandes
+	catégorie confirmé			⊞ ⊞ ⊞
+	catégorie intermédiaire			⊞ ⊞ ⊞
+	catégorie novice			⊞ ⊞ ⊞

Below the table, there are two buttons: 'Ajouter une catégorie supplémentaire' and 'Ajouter trois catégories supplémentaires'.

From the category list, you can add one or three categories per action.

## Adding categories

1. Click on the "Add a category" button
2. Fill in the form
3. Click on "Save"

## Deleting a category

Deleting a category will delete also all answers attached to this category in all registered questions. It will also delete all user scores linked to that category.
