MPlayer module : Technical guide

Capabilities

Capability index

Internal formats : the media manifest file (.stm)

STM files are manifests that are used as proxy descriptors for remotely dispatched medias. the effective media file may be stored into an extra storage out of control of Moodle and may be delivered from a streamed URL. the manifest file should be usually built by the MPlayer module, after a media upload. the manifest file is an XML file with a simple internal schema :

```
<XML version="1.0">
<Video>
   <Source>
      <streamer>wowza</streamer>
      <streamerurl>rtmp://medias.mysite/com</streamerurl>
      <appication>/vod</application>
      <clip>0</clip>
      <location>mp4:streamedfile.mp4</location>
   </Source>
</Video>
```
