MPlayer Module - Media Player: User Guide

Using JW Player: Media resources

The "Media files" parameter makes it possible to create a playlist according to different criteria.

- **The “Captions” folder:**
- **The “Cues” folder:** Optionally contains the breakpoint files
- **The “Medias” folder:** This is the folder where you can drop the videos you want to see appear in the playlist. Make sure you have selected “internal videos” below.
- **The “Playlist” folder:**
- The “Posters” folder: Not used by JWplayer.
- **The “Thumbs” folder:** For JWPlayer, replaces the 'poster' notion of FlowPlayer. The image is displayed when the video is stopped and each indexed media entry can have its own still image.
- **The “Tracks” folder:**

The playlist videos can be integrated in different ways:

- **Internal videos:** The videos will be stored directly on the platform.
- **YouTube:** YouTube videos can be integrated via URLs (see Parameter 3.)
- **External videos (via URLs):** External videos coming from a third-party site can be added via URLs (see Parameter 3.)
- **XML Playlists:** XML playlist files can be integrated in the “Playlists” folder (see parameter 1.)
- **Sound:** An audio file to use the player as an audio reader.
- **Image:**
- **HTTP Streaming:** Video source coming from a pseudo-http server.
- **Lighttpd Streaming:** Video source coming from a Light http server.
- **RTMP Streaming:** Video source based on an RTMP stream (Live broadcast)

Before integrating any video, check the copyrights.

It is in this space that one or several URLs can be added. You must first select the appropriate option in the Playlist videos parameter.

Path to find the videos you have dropped

Example:
http://demo.formation-enligne.com/pluginfile.php/3171/mod_mplayer/mplayerfile/0/video.mp4 where “video.mp4” is the video name

This parameter determines where the playlist is located visually: on the right, below, no preference.

Back to the user guide index - Back to the component index - Back to the plugin index - Back to the catalog
