Training Certificate Module (PDCertificate): User Guide

Introduction

This module allows a powerful and flexible layout engine, allowing each certificate to be customized in a different way, with layouts ranging from the formal letter to the diploma in landscape format. PDCertificate is aiming to become a full document generator, capable of generating **multiple page documents**.

It also provides *courses chaining* so that withdrawal of a certificate by the beneficiary automatically register the student in “next chained” courses, upon a configured role.

- Customizable elements of the certificates: Title, logo, frame, background, date, credit of hours, name of the participant, message, educational objective, Date of issue, QR code, illustrations, fields of personalized profiles, activity note, course note..
- Adjustment of the precise position of the elements: QR code, margin, watermark, signature, seal or logo.

- Central Settings
- Instance Settings

Manage the issuance of certificates

This screen is accessible for teachers.

- Display by group (if groups enabled)
- Summary of the certificates generated, not generated (because conditions required for unfilled issue), ready
- Visualization by page : 20, 50 or 100 certificates
- Search by first name or first name

Click on the certificate to access this management interface

Menus available for each certificate

- View date and time of issue
- Recover pdf
- Delete the certificate
- Regenerate the certificate
- Lock/unlock certificate **(PRO)**
- Overload in hours or days in case of absence, to substitute this value for that of the training **(PRO)**

Mass actions

For the selected certificates:

- Destroy
- Generate
- Export
- Lock
- Unlock

Data related to PRO version : Absence management

- Individual locking of certificates, in the case of absence.
- Time spent by learning partially absent from a training that will be called by the dynamic field {{info:certificate_user_credit_hours}} (in hours) or {{info:certificate_user_credit_days}} (in days)

Explanation of the management rule :

The notions of time and state lock have been separated to remain orthogonal and not mix the features.

- overloaded time in certificate management:
- if empty fields = resume the duration of the training {{info:certificate_credit_hours}}
- if fields not empty display the selected value in {{info:certificate_user_credit_hours}}
- Status of certificate if lock : certificate blocked

Example :

In the body of the certificate, use of the shortcode {{info:certificate_user_credit_hours}}

The user was enrolled on a training of {{info:certificate_credit_hours}} hours and directed **{{info:certificate_user_credit_hours}}** hours.
