

Report on learning time

- **Type de composant** : Report
- **Nom** : LearningtimeCheck (Report on learning time)
- **Concept** : ADMINISTRATION
- **Famille fonctionnelle** : Administration
- **Versions** :  to 
- **Old version** : M24 to M26
- **Distribution** : Projets d'intégration
- **Versions public** : http://github.com/vfremaux/moodle-report_learningtimecheck (private)
- **Availability**: Stable

VOLUMETRY WARNING

Any feature requiring extensive data mining (reports, statistics, summaries) can be a major performance issue on an operating site when the scope of the computation is extended (for example: give me ALL the details about ALL users on ALL courses). The LTC summary reports are designed to avoid configurations that would require massive and complete extraction of course data. To envisage a systematic automation of massive reports on all platform data handling large volumes, specific engineering must be considered (data replication, batch offset, queuing, outsourced processing, etc.), in addition to primitives offered by this module.

Builds

[Travis-ci Intégration continue](#)

Note : Un statut "Failing" n'est pas nécessairement lié à un non fonctionnement du plugin. Ce statut concerne le résultat de tests automatiques de conformité du code aux standards stricts de Moodle. Nous dépensons un effort permanent à la mise en conformité progressive de tous les plugins supportés avec ces règles de développement.
