

VMoodle Report

Type : Reporting

This report allows to centralize an observation of pedagogical uses throughout an accessible MNET network.

the current construction of the module is linked to certain constraints : The databases of the sites must be located on the same server and must be readable by the technical user of the main platform of a VMoodle installation.

Only the VMoodle Network Driver Plateform can display these reports.

Report structure

The report presents a series of results (tabular) for each of the subsites in the network. A summary table provides the global amounts of the indicators.

Reports

- Report on registered users
- Report on connections
- Report on the use of activity modules
- Report on the use of blocks
- Report on the use of course formats
- Report on the use of question types
- Report : [sharedresources usage](#)

Associated components

[VMoodle : Moodle Applicative Virtualisation](#)
