Klassplace Theme

Design specifications

Layouts

The Klassplace theme is designed to adapt to a (limited) number of screen layout designs common in web content editing practice. The main options determine the presence and use of “background images” dressing the structure, either full screen or partially in headers or footers.

We generally distinguish:

- The header area, recurring or adaptive
- The side and accessory areas, with or without the possibility of being retracted (drawers)
- The main content area, itself more or less provided with internal layout capabilities

Some pages with a particular use (front page, administration, reports) may require exceptions to the “standard” content layout. The choice of these exceptions can also be motivated by information density.
