Backup Manager: Backup file monitoring and management tool

Description

The Backup file manager tool lets you view, analyse and locally purge the backup files that accumulate in the various file areas intended for backups.

Backups, whether automatic or made manually by teachers, can sometimes accumulate and take up a significant share of Moodle's file storage folder. It can be useful from time to time to audit these file repositories and rationalise their content.

This tool lets you view all the storage areas for this type of file, know their volume, audit their relative sizes and make clean-up decisions.

Features

- Synthetic view of backup file volumes
- Detailed local view of backup file volumes, by context (course, user, automatic backups)
- Sorting by size
- Filtering on file age
- Purge commands for the storage areas

Road map

Technical sheet

- **Component type:** Administration tool
- **Name:** Backup file manager
- **Technical name:** tool_backup_manager
- **Supported versions:** 

to 

- **Distribution:** Moodle Marketplace

Builds

Note: a “Failing” status does not necessarily mean that the plugin does not work. This status reflects the result of automated tests checking the code against Moodle's strict standards. We are continuously working on bringing all supported plugins progressively into compliance with these development rules.

Branch	Continuous integration tests
405	MOODLE_405_STABLE pending

Branch	Continuous integration tests
501	MOODLE_501_STABLE pending
