Tool CohortFromCourse (export of enrolled users to a cohort): installation

Installing this component will require creating a “customscript” to implement the menu item in the course menu (until another solution is available - See the technical note).

- Download and deploy the archive into the `admin/tool` directory of your Moodle installation
- Navigate to the administration notifications to complete the installation.

Setting up customscripting

Your platform must support “customscripts”:

- in your Moodle root, create a directory `<moodleroot>/customscripts`
- in the config.php file add:

```
$CFG->customscripts = '<moodleroot>/customscripts';
```

Setting up the link

- Copy the file <moodleroot>/course/view.php to the path <moodleroot>/customscripts/course
- Remove the inclusion of the config.php file
- Add a “die();” at the end of the file to avoid returning to the standard code
- <to be completed>
