Tool FileCheck (File storage integrity checker)

This administration tool checks the presence of the files indexed in Moodle's *Mdl_files* table and lets you mass-delete broken references.

Guides

- Installation guide
- User guide

Feature summary

- Scans the files table
- Provides a report on missing files
- Cleans the index of erroneous records
- Detects orphan files (physically stored, but no longer indexed in Moodle)
- Moves orphan files or deletes them
- Recovers missing files from other file storage references (security copy of moodledata, trashdirs, etc.)

Technical sheet

- **Component type:** Administration tool
- **Name:** File system check
- **Technical name:** tool_filecheck
- **Supported versions:** m41 to m53
- **Distribution:** Public
- **Availability:** Public open source.

Builds

Note: a “Failing” status does not necessarily mean that the plugin does not work. This status reflects the result of automated tests checking the code against Moodle's strict standards. We are continuously working on bringing all supported plugins progressively into compliance with these development rules.

Branch	Continuous integration tests
405	custom badge resource not found
501	custom badge resource not found
