Tool Sync: Avatar import file

Introduction

To synchronise user avatars, a compressed archive file (ZIP) must be built with the image files. The service configuration lets you choose the primary identification field that will link the images to the user accounts. The image names must then be built on that basis:

<%valueid%>.gif or <%valueid%>.jpg

The zip file must have a recognisable prefix that must be given to the userpictures_fileprefix parameter. The evaluation order is the alphabetical order of the (physical) file name. A successive examination of several updates can be organised if, for example, the files are named following a time sequence:

Example

```
userpictures_20111201.zip
userpictures_20111202.zip
userpictures_20111203.zip ...
```
